- | *Customizable and flexible remediation.*
- | *Quick and easy installation and use.*
- | *Unlimited Protected Sites*
- | *History reports of malware incidents.*

Detect Safe Browsing from Easy Solutions is an innovative tool to fight against the serious threat of Pharming where antivirus and spyware removal software are not effective.

Detect Safe Browsing scans the Hosts file and the processes, detecting malware that can poison the DNS Server and Hosts file on the victim's computer. Once detected, it is able to delete or stop the malware and direct the user to protected sites.

Detect Safe Browsing provides real time protection against pharming based on our proprietary cross validation scheme to guarantee that the end user won't be re-directed to fraudulent websites.

DSB FEATURES

Effective Protection against Pharming, where antivirus are not effective

Pharming has become of major concern to businesses hosting e-commerce and to online banking websites. Antivirus software and spyware removal utilities cannot protect against pharming. Detect Safe Browsing is specifically designed to effectively protect against Pharming.

Proactive detection of malware that re-directs to fraudulent websites

Since Pharming is designed to be completely hidden from the end-user, regular scanning is critical for detecting malware that redirects to fake websites where the user's personal information and other sensitive information can be stolen.

DSB FEATURES

Simple and Easy Installation and use

The downloading and installation of Detect Safe Browsing only takes a few seconds. The scanning process is so fast that it can be done before visiting any protected site.

Easy access to unlimited Protected Sites

The user can access his or her personal list of Protected Sites at any time, with the option to add, edit or delete new URLs with no restrictions.

Designed for end-users in a home or business environment.

Detect Safe Browsing offers protection at the end-user level and is designed to be installed and used in home or office computers.

Know the end user experience

Detect Safe Browsing provides an unprecedented way of detecting in real-time the hostile environments affecting your end-users and provides the best strategies to avoid financial losses and loss of confidence in your online environment.

Customizable and flexible remediation

When Detect Safe Browsing detects malware, it offers a "Quick Fix" with just one click. It also includes an "Advanced Fix" in which the user can decide whether to delete or ignore the malicious entry or process.

Customizable Look & Feel

Detect Safe Browsing can be personalized to reflect the look & feel of your organization. Installing the personalized Security Icon® on the user's computer desktop will increase brand awareness and loyalty.
