

# Total Fraud Protection®

## Anti-Phishing Protection

Get multi-layered phishing attack protection and prevention for your business and client base

There is a rich mosaic of fraud attacks that can potentially harm your business. Phishing scams and malware target organizations and their customers via email, social media, rogue mobile apps and fictitious domains. Sophisticated phishers can also 'scrape' your website (compile its content and data) to rapidly build a copy-cat in a bid to fool your customers. Easy Solutions' anti-phishing protection system can discover phishing and malware attacks lurking on the internet and neutralize them before they can do any damage.

### Highlights:

- > Real-time detection and takedown of websites hosting phishing attacks and malware
- > Anti-fraud protection – stop phishers and spammers from spoofing your domain name
- > Sends instant warnings about credit card security breaches with black market monitoring
- > Dramatic reduction of phishing attacks through an intelligent email filtering system
- > Disables fraudulent websites in 3.6 hours on average – the fastest of any security firm on the market
- > Keep users protected as phishing goes beyond email to social networks and apps

## Anti-Phishing Protection Features

### *Reliable Domain Detection and Threat Removal*

Detect Monitoring Service ensures that your reputation is safe from phishing attacks by identifying domains that are trying to spoof your brand. Our team of web fraud experts work to take down websites launching such attacks quickly, greatly reducing the risk that one of your clients will be fooled by them.

### *Proactively 'Search and Destroy' Fraud Attacks*

Phishing, pharming and malware attacks must be detected and shut down early in their threat lifecycles if financial losses are to be prevented. 76% of the time we ward off these attacks proactively, meaning they're thwarted before our clients or their customers knew they were in a fraudster's sights.

### *Invaluable Brand Threat Intelligence*

Detect Monitoring Service goes beyond attack detection and deactivation by also monitoring mentions of your brand across thousands of social media platforms, blogs and mobile app stores, giving your business an easy way to comply with FFIEC and other local and international guidelines for managing risk in social media.

### *Restore Trust in Your Email Channel*

Easy Solutions' DMARC Compass provides smart filtering and security of your email channel, reducing the amount of spoofed emails that make it to your customers' inboxes. The threat analytics feature of the solution gives you visibility – so you know who is trying to defraud you and your clients and can quickly stop them.

### *Identify Threat Actors and Prevent Their Campaigns*

The Detect Monitoring Service and DMARC Compass solutions work in concert with one another. Detect Monitoring Service takes advantage of the DMARC reporting data and analytics to quantify email abuse, speedily uncover phishers and take down all kinds of threats at their source, protecting your entire customer population.

### *Multi-Layered Phishing Protection*

Attack detection and takedown should only be the beginning of your all-inclusive anti-phishing strategy. Go even further with DetectID, multi-factor authentication that makes stolen credentials useless, and Detect Safe Browsing, a solution that malware finds and disables the malware attached to phishing emails.
