

# DetectID® Cloud

## Cloud Authentication Made Simple

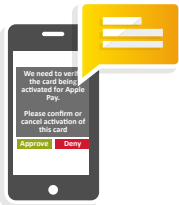

DetectID Cloud secures web applications, online portals and other systems in an efficient and cost-effective manner — without the overhead expenses commonly associated with the implementation and maintenance of on-premise multi-factor authentication solutions. Easy Solutions' next-generation authentication technology enables DetectID Cloud to safeguard customer access from anywhere, at any time, on any device.

### Highlights:

- Convenient authentication framework for your growing mobile user base
- No downtime or change management overhead
- No new hardware or software to deploy
- Reduces deployment, support and maintenance costs
- High availability to support large customer bases
- Extensive APIs to increase self-service automation

## DetectID<sup>®</sup> Cloud Features

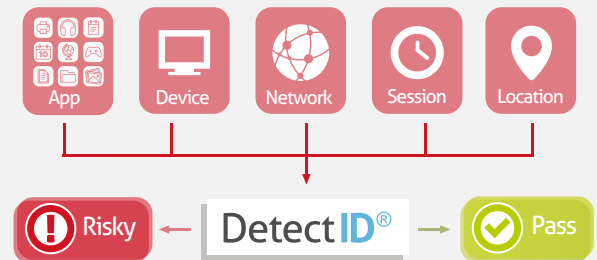

### Authentication Made Simple

DetectID Cloud was designed to replace complicated and bulky legacy authentication systems. Our innovative technology allows your end users to authenticate with a single tap.

### Adaptive Authentication

Combine real-time analytics of user behavior, location and device parameters so that two-factor authentication is only required when absolutely necessary. Gain full visibility and assess risk on all devices and end users interacting with your application.

### Lower Total Cost of Ownership

Slash the expense of maintaining a future-forward multi-factor authentication system. Costs such as the management and upkeep of the hardware and software infrastructure required for typical on-premise authentication deployments are greatly reduced using DetectID Cloud.

### Highly Available, Accessible & Scalable

DetectID Cloud supports large customer bases with no downtime, and the solution's robust infrastructure is backed with a strong service-level agreement that can be configured for as many high-availability, high-performance architectures as are required. Each organization has its own private realm for managing their domains, users and soft tokens.

### Easily Integrates into Your Security Strategy

Complement your current security solutions, decrease change management overhead and deploy quickly, layering simple and strong authentication on top of your existing infrastructure.
