Total **Fraud Protection®**

Cyxtera

External Threat Protection

Attacks coming from social media, mobile apps and emails are now commonplace and more dangerous than ever.

No matter how secure internal systems are, the fact remains that most fraud attacks target end-users. Social media, mobile apps, cousin domains, spoofed emails, and malware can all be used to carry out fraud. Proactively protect your organization from all of them.

Constant protection from our Security Operations Center (SOC) that monitors and takes down external threats targeting your company

Highlights

- Proactive phishing attack detection and takedown by consolidating millions of information sources across Internet , including social media sites, blogs, forums, etc.
- Email visibility to stop phishing attacks that spoof your domain from reaching employees and customers
- Notifications when similar domains are registered that could potentially be used to spoof your company
- Alerts when your customer devices are known to be compromised with malware
- Proactive detection and takedown of fake mobile apps imitating your company on third-party app stores
- Social media monitoring for any accounts that are using your company to trick customers

Do you have the time and resources you need to find and stop early stage fraud?

Let our trained team of experts handle the external threats targeting your company so you can get back to creating customer value!

Cyxtera

Proactively stop attacks with external threat protection

Proactive Detection and Removal of Online Threats

We discover, report and remove a wide range of online attacks targeting your customers quickly and cost effectively. Employing advanced detection and machine learning technologies, we proactively monitor millions of information sources across Internet and email channels. Our platform is complemented with security analyst expertise to ensure tailored and accurate detection and takedown.

Monitoring of Social Media and App Stores

Our trained team combs over social media, and official and third-party app stores, looking for cybercriminals who are trying to impersonate your brand. When they find one, they initiate the takedown process before your customers can accidently download potential malware.

Company Impersonation Protection

Our team identifies and takes down social accounts impersonating your brand or employees. Additionally, we monitor all new domain registrations for ones that may be imitating your legitimate URLs.

Real-time Alerts when External Threats are Detected

Security teams receive real-time alerts when malware infections are discovered on end-user devices, as well as alerts for potential phishing sites and account takeover. Teams also receive alerts about new threats when suspicious activity is identified.

Comprehensive Reporting

Complete view of incidents and incident status through the portal. Ability to set up email alerts, create quick online customizable reports and request additional takedown on specific attacks.
