

SwordPhish

Beyond Blacklists: Predict & Classify Malicious URLs

Try Web Tool Now Free: <http://www.easysol.net/swordphish>

Identify and classify malicious URLs and domains through prediction – not blacklists. Using machine learning technology, Swordphish is trained to understand key features that make up URLs or domain names and analyze their likelihood of being risky.

Score hundreds of URLs in milliseconds with our streaming API

Highlights

- **Predict vs. React**

Hackers use VirusTotal too. Swordphish predicts the maliciousness of any URL or domain. Phishing, Malware C&C and Ransomware DGA. No blacklists.

- **Add Prediction to Existing Workflows**

Abuse management, DNS lookups, outbound proxy, firewall logs. Identify and measure risk posed by zero-day attack URLs and domains.

- **REST-based, super-fast API**

Integrating machine learning based prediction doesn't need to be hard. Scale from hundreds of queries to hundreds of thousands.
